

I am a software developer specializing in PHP, particularly Symfony and other frameworks, as well as API development (creation and integration).

For over 15 years, I have been contributing my expertise across industries such as e-commerce, mobility, and insurance. My areas of expertise include not only development but also software architecture, data modeling, and technical conception. I continuously deepen and expand my knowledge in these areas.

The companies I have had the privilege to work for range from small startups to established giants like ABOUT YOU, Deutsche Bahn, and IBM iX.

My work approach combines a high standard of quality with a focus on efficiency. Therefore, the application of Clean Code and Clean Architecture principles is as natural to me as the constant pursuit of process optimization—both individually and as a team.

Despite my extensive experience, I maintain a dynamic startup mentality and bring tireless energy and initiative to every project. My communication is characterized by openness, directness, and honesty, complemented by a culture of embracing mistakes as learning opportunities and a readiness to continuously learn and share knowledge.
